

It's time to stop the MeSH Madness

Every day thousands of women across the United States and around the world have a simple surgery. Mesh is used in pelvic floor surgery or prolapse surgery, hysterectomies and Cesarean sections. It is also used to repair hernias in both men and women.

There are SO MANY ways they use MeSH these days.

The complications are sometimes immediate... and sometimes develop years later. So many horrible adverse events. You don't realize the lives damaged all around you. The next time you watch a woman with a walking cane... hobbling across the street... maybe you'll wonder if she's one of the thousands damaged by MeSH.

Injuries caused by pelvic floor mesh are often permanent and debilitating. Pelvic medical mesh is difficult to remove. Few doctors in the world know how to do it without causing hemorrhage or permanent nerve damage and disability.

These injuries can happen to women of all ages young and old

We need **ALL MeSH** removed from the market... for the next generation... for your daughters and your granddaughters.

Stop this mutilation... Stop this Madness.

Please join our campaign to raise awareness on the complications and deaths of women due to medical mesh disasters.
